

Bulk Emulsion Storage Tanks

AN AUSTRALIAN SOLUTION FOR AUSTRALIAN CONDITIONS

Boral bulk emulsion storage tanks have been developed specifically for industry to provide a durable, high-performance solution for safe storage of emulsion at your site. The tanks are available in sizes from 15,000 litres up to 45,000 litres.

Boral tanks are fitted with thermostat-controlled adjustable heating and feature automatic product circulation. These functions will keep your emulsion at the perfect temperature and in the best condition for your projects all year.

The tanks are built in Australia using 6mm Australian steel, they are seam-welded inside and out for strength and durability and come with a 10-year tank warranty. They are built to Australian Standards AS 1170 and AS 4100.

Boral emulsion tanks are sandblasted and painted in long-lasting primer and UV-resistant industrial paint. They are tested for quality and operation prior to leaving the manufacturing facility.

Tank signage is supplied to indicate product type and Safe Fill Level. The tanks are installed by Boral's expert team. Installation, operator manuals and training are included with the purchase.

Features

AUSTRALIAN-MADE

Centrifugal pumps (that don't shear the emulsion) are used for pumping and circulation of the product. Quality stainless steel valves are used for durability.

EASY TO USE CONTROL PANEL

Comes with emergency stop. A 15-metre pendant pump switch is provided for fingertip operation at the truck.

A DIGITAL LEVEL GAUGE

High-level alarm to prevent overflow. This alarm is both audible and visual.

Delivery

CUSTOMER REQUIREMENTS

Customers need to provide a bunded slab in accordance with AS 1940 and a 3-phase 32-amp electrical supply for pump and heating operation tank to be installed on their site.

Boral delivers emulsion in specialty products vehicles used only to deliver emulsion and precoat products.
